SUMMARY

I am passionate about hands-on software development and focus on writing better code, understanding systems more deeply, delivering practical solutions. Having experienced in Java Spring Boot, Node.js and RESTful API which I used it to build many things from e-commerce platforms to transaction systems.

EDUCATION & ACHIEVEMENTS

UNIVERSITY OF INFORMATION TECHNOLOGY, VNU-HCM (UIT)

Bachelor's Degree in Information Technology

Expected Graduation Year: 01/2027

GPA: 8.4/10 · IELTS: 6.0

TECHNICAL SKILLS

Backend: Java, Spring Boot, Spring AOP, Spring Security, Node.js, Express.js

Frontend: React.js, TypeScript

Database: PostgreSQL, Redis (Caching, Distributed Lock)

Tools: Git, JUnit 5, Mockito, Spring Boot Test

Protocols & Patterns: RESTful API, WebSocket, JWT

WORK EXPERIENCE

HDBANK - GALAXY INNOVATION HUB | Backend Developer Intern

11/2025 - 05/2026

- Developed and maintained RESTful APIs using Spring Boot for basic transactions system that using PostgreSQL, including optimizing query performance through proper indexing, integrated pagination, clean separation of business logic and data access layers.
- Collaborated in an Agile team environment, participated in code reviews and daily standups to deliver the capstone project on schedule.

PROJECTS

PITCH MANAGEMENT SYSTEM | Backend Developer

01/2026 - 05/2026

GitHub: github.com/ducpham211/pitch-management-system

- Designed RESTful APIs with Spring Boot & MapStruct; integrated Redis caching, reducing average query latency to ~15ms and ~2ms combining with Unit & Integration Tests JUnit 5, Mockito, @SpringBootTest.
- Implemented Redis Distributed Lock to prevent overbooking race conditions, guaranteeing 100% booking consistency.
- Replaced HTTP polling with WebSocket (STOMP), cutting notification delivery from ~3s down to real-time push (<50ms).
- Adopted stateless JWT authentication, enabling horizontal scaling without session replication.

Technology: Java, Spring Boot, PostgreSQL, Redis, OpenAI, Stripe API, Flyway, WebSocket.

AUTO AUDIT LOGGING STARTER | Core Library Developer

12/2025 - 04/2026

GitHub: github.com/ducpham211/auto-audit-logging

- Developed a plug-and-play Spring Boot Starter utilizing Spring AOP (@Around) to non-invasively automate audit logging and eliminate boilerplate code.
- Engineered an asynchronous (@Async) logging mechanism with a dedicated ThreadPool to ensure zero latency impact on main transactions.
- Implemented Data Masking via Jackson BeanSerializerModifier to dynamically filter and protect sensitive information.
- Ensured library reliability with Unit & Integration Tests (JUnit 5, Mockito, @SpringBootTest) covering AOP interception, binary-data filtering, and JSON data masking.

Technology: Java, AOP, JUnit 5, Mockito, Spring Boot Test.
