EDUCATION

UNIVERSITY OF INFORMATION TECHNOLOGY,
VNU-HCM (UIT)

Bachelor's Degree in Information Technology

Expected Graduation: 01/2027

TECHNICAL SKILLS

Backend: Java

Database: PostgreSQL.

Other Languages: JavaScript, TypeScript.

ACHIEVEMENTS

GPA : 8.4/10

IELTS : 6.0

WORK EXPERIENCE

HDBANK – GALAXY INNOVATION HUB | Backend Developer Intern

PERIOD : 01/2026 – 04/2026

- Mastered the backend development lifecycle from Core Java to Spring Boot, focusing on database architecture, secure API design, and complex business logic implementation.
- Acquired practical experience in professional workflows and project management, culminating in the independent development of a full-scale capstone project.

PROJECTS

PITCH MANAGEMENT SYSTEM | Backend Developer

GitHub: github.com/ducpham211/pitch-management-system

What I've done :

- **Architecture & API:** Designed scalable RESTful APIs using Spring Boot and MapStruct for efficient DTO mapping and integrated pagination.
- **Security:** Secured endpoints with Spring Security & JWT, enforcing Role-Based Access Control (RBAC).
- **Database:** Managed PostgreSQL data with Spring Data JPA/Hibernate and maintained schema using Flyway.
- **Real-time & Caching:** Implemented instant notifications via WebSocket and optimized performance with Dockerized Redis.

AUTO AUDIT LOGGING STARTER | Core Library Developer

GitHub: <https://github.com/ducpham211/auto-audit-logging>

What I've done :

- **Architecture:** Developed a plug-and-play Spring Boot Starter to automate audit logging, reducing boilerplate code.
- **AOP:** Leveraged Spring AOP (@Around) to non-invasively intercept methods and extract execution context.
- **Performance:** Engineered an asynchronous (@Async) logging mechanism with a dedicated ThreadPool to ensure zero latency impact.
- **Security:** Implemented Data Masking via Jackson BeanSerializerModifier and memory-safe filters to skip large binary streams.
